It was Solid Constructors who built the building.

There is an alarm panel from Peak Alarm, but I was considering getting rid of it, in don't think it's necessary.

I think if having to choose in would prefer putting in an alarm instead of sheetrock and doors that are fire rated

Subject: More info required.

For an FYI:

Do you have an Access Control system? (Desmond said you punched in some numbers to get in?)

If you do, send me photographs of the panel/unit.

And ..

Some options:

- Put an alarm system back in; or sheetrock to increase the Fire Rating of the walls.

- Calcs & Permits will be required.

Also can you tell me the Builder again? ☺
